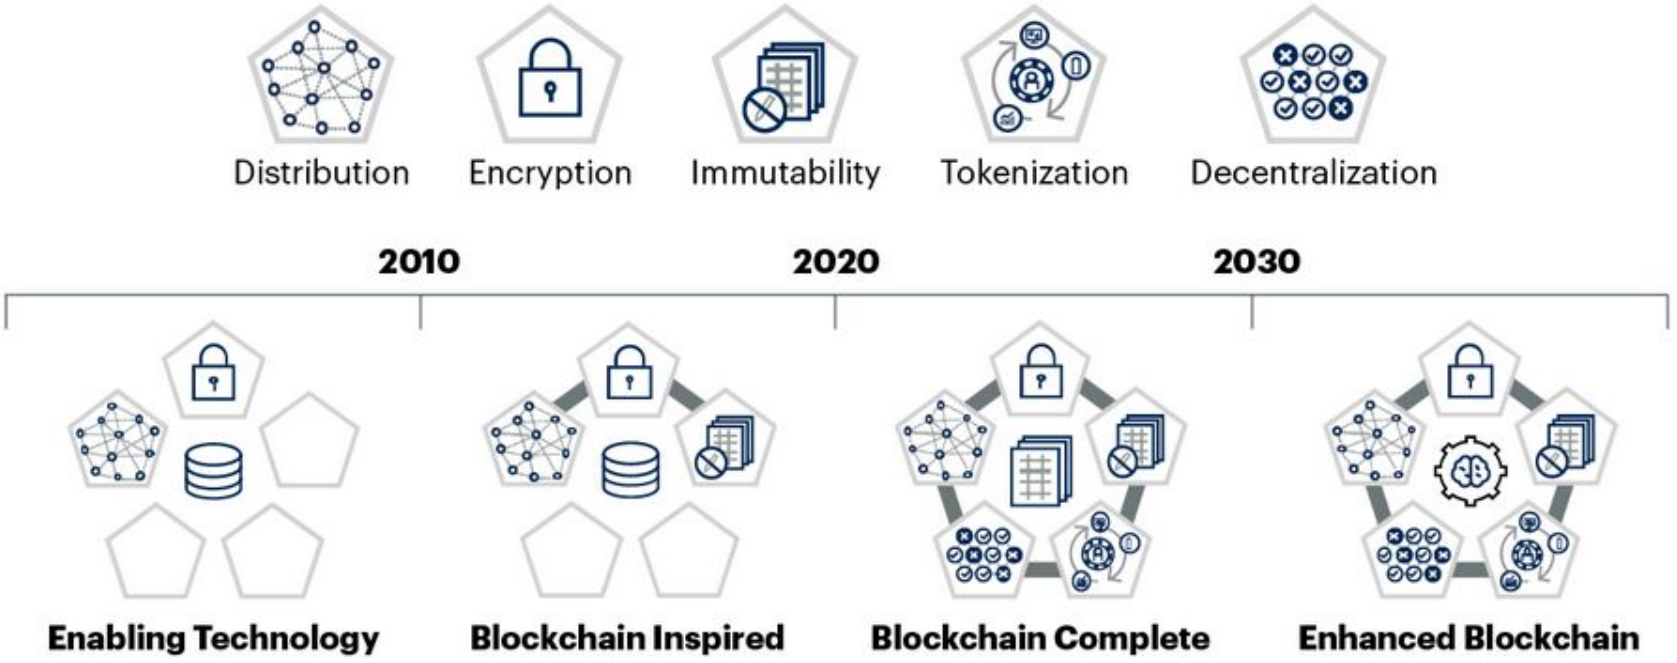
Blockchain Spectrum



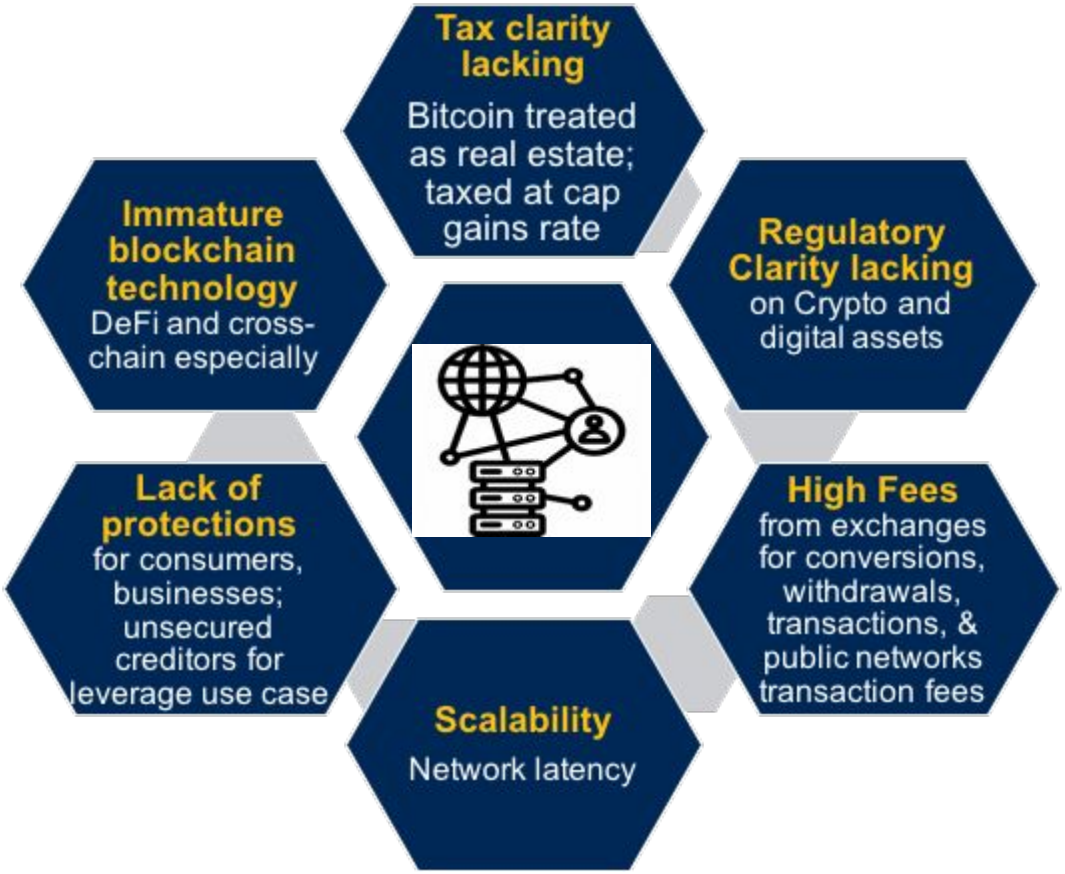
Source: Gartner

Blockchain is still an evolving technology

According to Gartner, "successful permissioned (enterprise) blockchain projects are scarce."

"The cost of immature technology is still high; ROI is still unproven."

DTS has met with some potential providers and will continue to monitor developments for solutions that might present opportunities to improve government operations.



There are still many challenges working with crypto/digital currencies

Summary

- Blockchain is a promising technology, and is already being used in a variety of ways
- It is still a developing technology
- The state will most likely utilize blockchain technology by purchasing applications that embed blockchain, not by developing blockchain-based products directly
